

The Exchange Tower - Elevator Cab Interiors

Location Toronto, Ontario
Designer / Architect Soheil Mosun Limited
Duration Oct 1994 - Dec 1994

Scope - Soheil Mosun Limited was contracted to modernize (8) passenger elevator cabs at the Exchange Tower in Toronto's financial district.

Highlights - These cabs were completely refitted and weight was reduced overall by using modern materials. The panels are .048 cold rolled steel sheets that have been finished and patinaed using Soheil Mosun Limited's special finishing methods. Each of these panels is an individual work of art. The floors are black lace slate. The LCD screen was mounted using Soheil Mosun Limited's patented mounting bracket system. Features also include steel tube railing with matching patinaed finish, low voltage down lights, (48) panels of grey laminated mirrors, .036 mild steel patterned ceilings and etched cab number identification on stainless steel. Operating panels are stainless steel as well.

Detail of the black lace slate floor

Each patinated panel is a unique piece of art created with a tropical jungle theme.
